The B.E.S.T. Behavior Transformation System™

Full-Day Training

What if we spent less time reacting to challenging behaviors and more time preventing them? Imagine having a plan for preventing crises, understanding behaviors, and helping students develop the skills to succeed.

Transforming behavior takes more than strategies. We've all tried interventions that worked one day and failed the next. That's because behavior doesn't happen in isolation. It's influenced by students, adults, environments, and systems.

In **The B.E.S.T. Behavior Transformation System™**, we'll explore four essential pillars: Behavior Analysis, Environmental Engineering, Safety-Centered De-escalation, and Teaching Accountability. You'll learn how these elements work together to prevent and respond to challenging behaviors while creating safer, more supportive classrooms where everyone thrives.

What You'll Learn

In this engaging, classroom-tested training, we'll explore how to:

- **Analyze challenging behaviors to identify patterns, underlying functions, and opportunities for intervention.**
- **Engineer classroom environments that reduce triggers, increase predictability, and prevent behavioral crises.**
- **Apply safety-centered de-escalation strategies to reduce tension and respond confidently during crises.**
- **Teach meaningful accountability through consequences, reflection, and practicing appropriate replacement behaviors.**
- **Integrate all four B.E.S.T. pillars into a comprehensive approach to lasting behavior change.**

Ready to Transform the Way Your School Approaches Behavior?

Lasting behavior change doesn't happen by chance. It happens when we understand students, create supportive environments, manage crises skillfully, and teach accountability. Let's bring the **B.E.S.T. System™** to your school or district and equip your team with the tools and confidence to create an environment where everyone thrives!
